## Streetwise Bollards

Watts Streetwise® Bollards are the next step in Bollard evolution. A highly durable and resilient material reinforced with a steel core, that is not painted and will never require painting. Manufactured exclusively by Watts using Terrathane® technology, Streetwise® Bollards are extremely resistant to vehicular impact damage and can also be specified with graffiti retardant agents that make it very difficult to fly post on.

Streetwise® Bollards are supplied black as standard with alternative colours available to specify and can also be specified as an anti ram option (150–155 only) or removable with socket and are available in a number of diameters, lengths and reflective tape configurations.

Streetwise® applications include walkways, verge markers, roadsides, car parks, demarcation, parking restrictors – in fact anywhere there is a requirement to unobtrusively prohibit / restrict the use of vehicles within a given area for the safety of pedestrians and property.

Streetwise® 150 Dome Single Ring
